**GENERAL PURPOSE
HOT DIPPED GALVANIZED PIPE**

Our galvanized pipe won't send you round the bend.

If you're looking for a galvanized pipe that'll get the job done every time, look no further than Metaland's General Purpose Hot Dipped Galvanized pipe. The high quality Hot Dipped Galvanized (HDG) coating virtually eliminates flaking or cracking when bending and forming. And its consistent quality between batches, bundles and lengths ensures you do the job right every time.

THE FACTS:

Consistent high quality pipe manufactured from top quality steel coil	True thermal Hot Dipped Galvanized (HDG) coating – NOT electrostatic or 'light' galvanized
Complies with BS 1387, AS 1074 & AS 1163-Grade C250 standards	Galvanized to a minimum zinc coating weight of 300 g/m ²
Consistent steel mass so you always get the steel you pay for	Superior HDG process and coil chemistry resists flaking even when bent to 180 degrees*
Tight tolerances ensure easy welding and connection of standard/proprietary end fittings	Smooth, controlled coating application combined with superior steel chemistry eliminates excessive zinc build up

Some galvanized pipe can flake when bending (far left). Thanks to its high quality Hot Dipped Galvanized coating, Metaland's General Purpose HDG resists flaking even when bent 180 degrees*.

Extra Light (XLT) wall	Light (LT) wall	Medium (MED) wall	Heavy (HVY) wall
